

General

Google Chrome OS Device Writeback - A new feature has been created that enables the system to write back selected fields to devices managed through Google Chrome Admin. To ensure this functionality operates correctly, a series of required configuration steps must be completed prior to use.

Setup

- 1. Enable Setting** - Contact Support or Implementation if you would like to enable this feature.
- 2. Import Settings** - Access the Google Chrome OS Device asset setting located in the Import Settings area and check the "OU Movement" flag.

Home > Import Properties > Asset Configurations > Google Chrome OS

Source	Destination	Preserve	Remove
Serial Number	Serial Number	☐	x
Serial Number	Asset ID	☐	x
Model	Asset Model	☐	x
Org Unit Path	Computer Name	☐	x
Status	Asset State	☐	x
Mac Address	Mac Address	☐	x
Serial Number	Vendor	☐	x
Org Unit Path	Site	☐	x

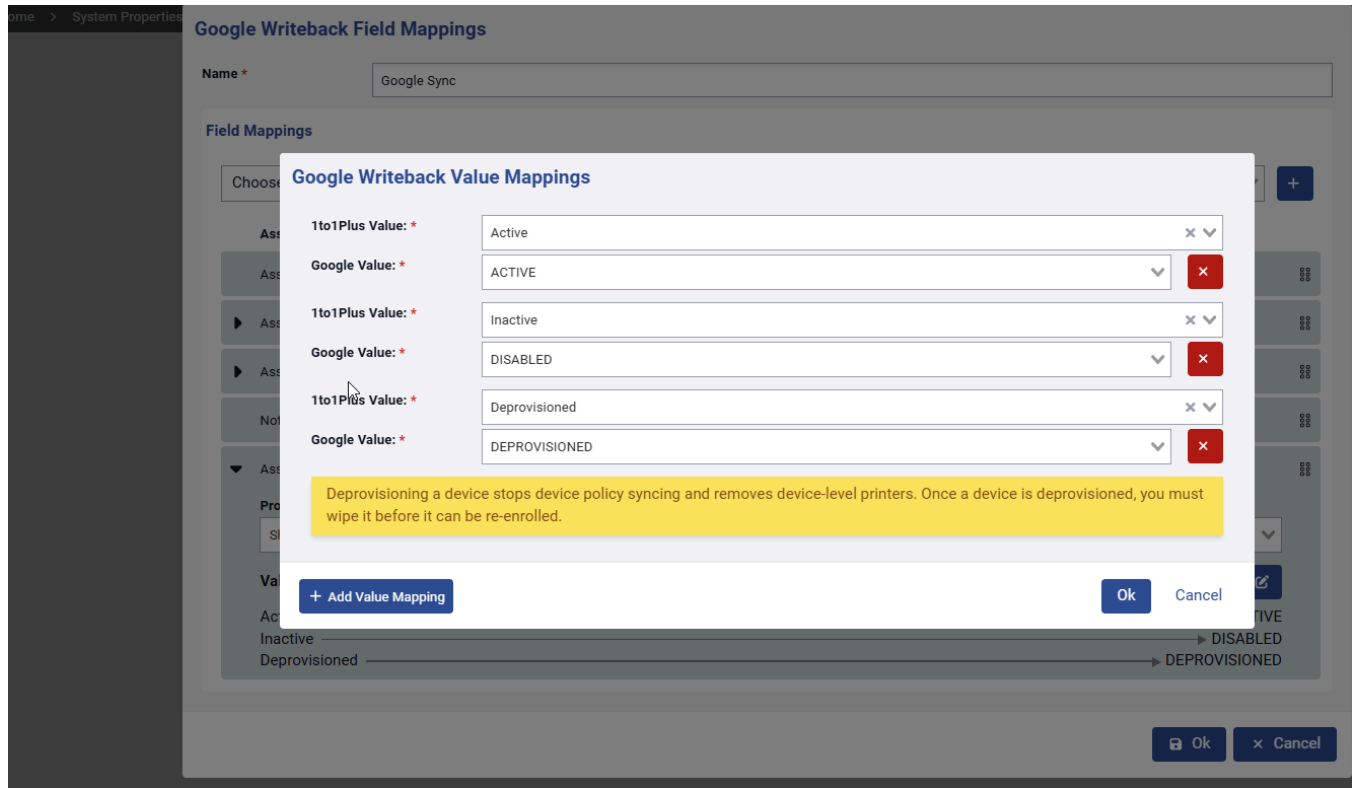

3. Rule Creation - Add a new rule for Assets for Google Chrome OS Device

In the Actions Section under MDM Changes, set up the action such as “Google Sync” and API Writeback Configs to match it. Then add the Google Writeback Field Mappings. The Source will be the fields in One to One Plus.

A message will warn you about setting a value mapping for Deprovisioned. Please use this with caution.

The screenshot shows the "Google Writeback Field Mappings" dialog box. The "Name" field is set to "Google Sync". The "Field Mappings" section contains three mappings:

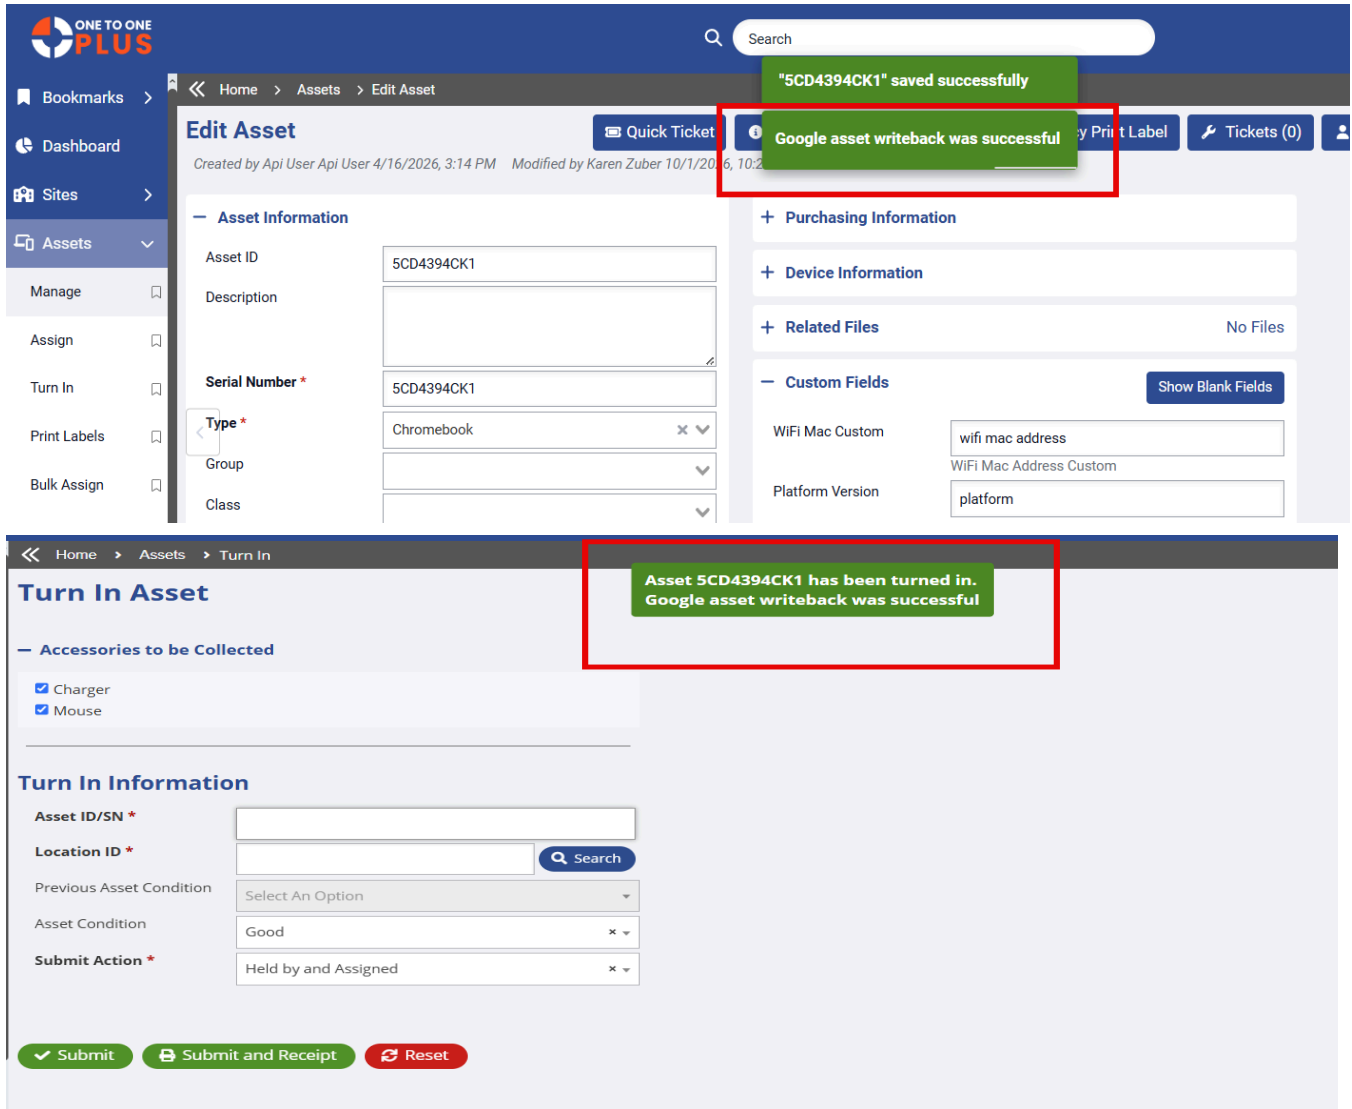

1to1Plus Value: *	Google Value: *
Active	ACTIVE
Inactive	DISABLED
Deprovisioned	DEPROVISIONED

A yellow warning message is displayed below the mappings:

Deprovisioning a device stops device policy syncing and removes device-level printers. Once a device is deprovisioned, you must wipe it before it can be re-enrolled.

The dialog box includes a "+ Add Value Mapping" button and "Ok" and "Cancel" buttons.

4. **Trigger Writeback** - When fields are edited on the Asset, it will trigger the rule to perform a google chrome device writeback. The write back process will also be triggered when Turn In, Assign and Bulk Update options are run.
